Resolution 2

U.N. Organ: General Assembly

U.N. Committee: General Assembly

Topic: Technology

Sponsor: Iraq

The General Assembly,

Taking into consideration that many nations around the world have low electricity outputs, including Iraq, who's electricity output has been reduced dramatically since 2003,

Having considered that many power lines, fuel lines, and electric towers are damaged in many nations, due to wars or other conflicts,

Noting with approval that Information and Communications Technology (ICT) took four years to reach 50 million people,

Keeping in mind that the average Iraqi home, along with many other households around the world, only have electricity for one or two hours per day,

1. Urges national governments and the U.N. to supply funding to countries in need of education in technological advances;
2. Calls upon the work of volunteers and donations of the community and the U.N. to help with the effort of repairing and restoring broken down power lines, fuel lines, and electric towers;
3. Expresses its hope that in due time, electricity will be at a higher standard with a higher output in countries that need it.
